

**Amendments to the Specification**

Please replace paragraph [0013], as previously amended, with the following.

[0013] Multiple access points 20, 22 may be connected across a network 26 as known in the art, such as via an RS485 connection across a Local Area Network (LAN). Each access point may be individually programmed to have access to different operations, display screens or alarms 28. The access points may be configured to only allow one controller to be used at any time or may indicate the location of any network activity.

Please replace paragraph [0015], as previously amended, with the following.

[0015] The pass key 12 of the present invention is preferably separable from the water treatment apparatus 10, and so includes an electronic circuit which can co-operate with an electronic circuit 16 in the host water treatment apparatus 10. The co-operation of the pass key and water treatment apparatus may be one way 30, either from the pass key to the apparatus or vice-versa, or two way 32.
